

Steam Specialties Quick Vent QV-1

Features and Benefits

- Forged and machined Brass Body, Cover and Cap
- Stainless Steel Bellows
- 1/2" NPT (male) Inlet
- Integral Vacuum Check Valve
- Capacity (CI/M) 1 psig = 5,300; 5 psig = 12,960; 15 psig = 24,100
- Weight = 1 Lb.

Applications

The MEPCO vacuum lock vent provides quick air vent elimination on steam mains where only air and steam are found. Quick vents should be located on all risers and steam lines where large volumes of air must be discharged and condensate is not present. To assure a positive "vacuum lock" a simple and efficient vacuum check ball provides no resistance to the discharging air but closes immediately preventing air from passing back into the system.

Note: Also available without check ball by ordering QV-1LC.
